

**Space Saver Rowing Systems to Debut at USRowing Convention**  
***Will Display Full Range of Rowing Storage Solutions***

*Canberra, Australia, November 11, 2010* – Space Saver Rowing Systems (SSRS), a world leader in rowing storage systems, will be exhibiting for the first time at the annual USRowing Convention in Tampa, Florida, December 2-4, at booth number 29.

At the event, SSRS will display a range of innovative equipment designed to help rowing clubs expand their current sheds while increasing the security and safety of both rowers and boats, including oar brackets, boat stackers, sliding boat arms, rowing electronics storage cubes and wing ringer brackets.

“Since rowing clubs are on the water, it’s often difficult for them to grow their memberships by adding new boats without expensive and, sometimes, impossible additions,” said owner and rower Douglas Lumsden. “Our products enable sheds to more easily and efficiently utilize their existing space to accommodate their changing equipment needs.”

SSRS has customers worldwide, including several in the United States such as Baylor School in Connecticut, Christchurch School in Virginia, Lehigh University in Pennsylvania and Lake Lanier Rowing Club in Georgia.
