

Black Mountain

Rowing Club

To whom it may concern

As the President of Black Mountain Rowing Club I wish to thank Space Saver Rowing Systems for making available the innovative Space Saver Oar Brackets.

Space Saver Oar Brackets have significantly reduced the space required for oar storage which has inturn freed up valuable boatshed space for other important uses. The storage system has also reduced damage to oars as once the oars have been placed in the rack the potential for damage due to oars falling has been reduced significantly

Upon the installation of the Space Saver Oar Brackets many advantages became obvious:

- It is easier to see which oars are stored or missing 'at a glance',
- The foot print required to store oars became negligible: so we can store more equipment in our limited space,
- The risk of our members injuring themselves when handling oars is reduced due to the unique Space Saver Oar Brackets hanging system
- The shed looks 'neater than before', and
- The Space Saver Oar Brackets were easily re-located during our last shed refurbishment.

The quality of the Space Saver Oar Brackets is such that I am sure they will be serviceable for many years to come.

I would also like to acknowledge the excellent service that Space Saver Rowing Systems Principal, Douglas Lumsden has provided to the Club when carrying out the numerous projects he has done for us.

Yours sincerely

Peter Wright
